

Dear Homeowner,

As the leader in helping homeowners lower their energy bills and gain energy independence in Your Market, we are delighted to introduce you to Lumin.®

In short, [Lumin](#) is a smart home energy manager that automates energy savings and responds and adjusts to external conditions (like outages or changing utility rates). The Lumin hardware installs to the electrical panel in your home, making your ordinary circuits smart. From there, you get complete control of your Lumin system from an app.

Why is this important? Because during a power outage, you want flexibility and control of the energy being generated by your solar system and stored in your battery.

Lumin optimizes today's solar + storage systems in many ways, but here are just a few:

#1 Protect your battery! At YOUR COMPANY, we love that Lumin bolsters your home's resiliency during an outage. We set up Lumin to operate according to your preferences and lifestyle, but we know that can change and you'll want the control of being able to access backed up circuits when the power is out. Lumin makes your entire system flexible and reconfigurable without tripping your battery which provides extra life to your system.

#2 Easily set up Lumin schedules and modes, enabling you to manage your energy consumption if you are away, if there is a grid outage or simply overnight to eliminate "vampire" energy consumption.

#3 Get 24/7 energy use data which helps you save money. You'll also have peace of mind knowing that if you leave power on when away from home, you can safely and immediately turn it off. Second homeowners are particularly fond of Lumin for this reason alone.
